

Resolution

The primary purpose of a microscope is
not to magnify, but to RESOLVE.

The image of a point is not a point

Resolution is limited because
the image of a point is an Airy disk

Minimum resolved distance was
derived by Ernst Abbe

$$d = \lambda / 2 \times NA$$

d

Minimum
resolved distance

λ

Wavelength of
imaging radiation

NA

Numerical Aperture

Numerical Aperture (NA) determines Airy disk size

NA increasing

Numerical Aperture (NA) determines Airy disk size and resolution

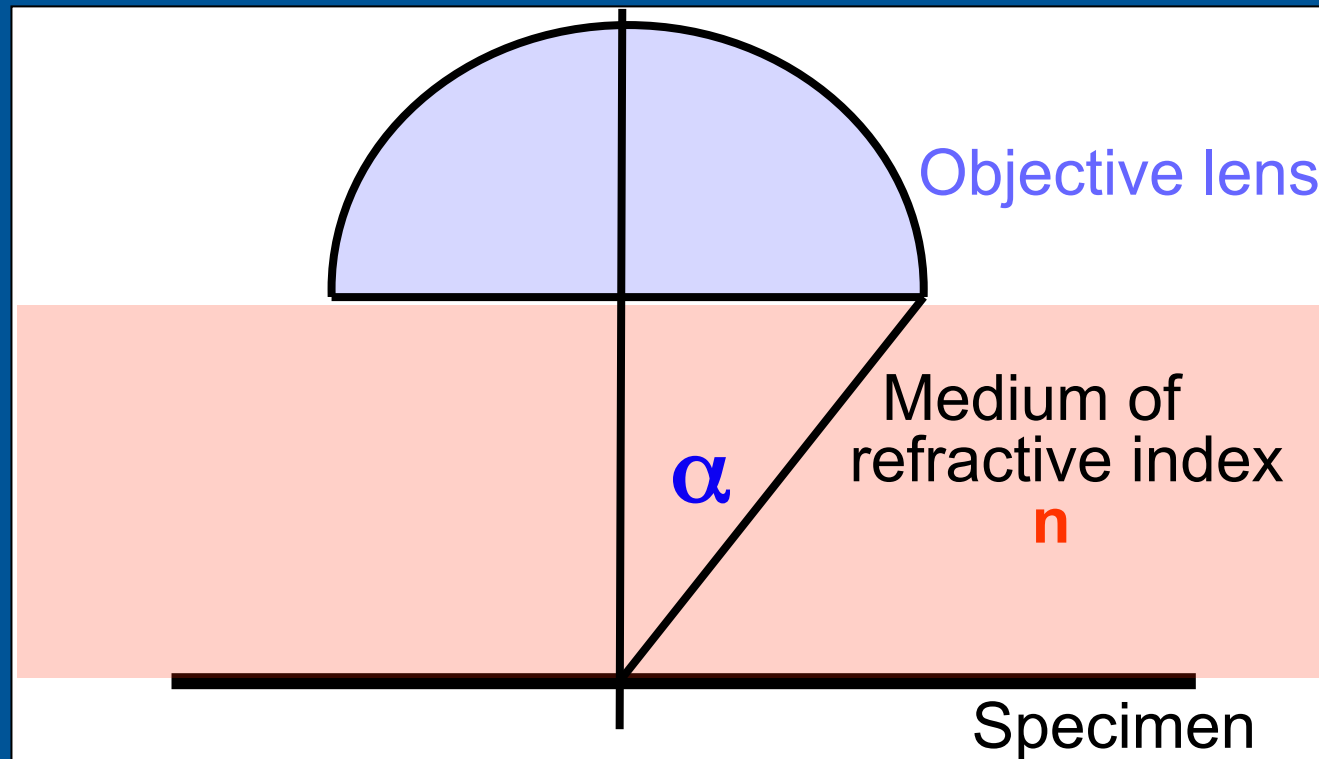

NA increasing

Numerical Aperture (NA) determines Airy disk size and light acceptance cone

NA increasing

Numerical Aperture is a key parameter of an objective lens

$$NA = n \sin \alpha$$

Typical values for NA
Air: 0.8 Water: 1.2 oil: 1.4

Dry Objective

Immersion Objective

Coverglass
Mountant
Slide

$$\begin{aligned} \text{NA} &= 1 \times \sin 72^\circ \\ &= 1 \times 0.95 \\ &= 0.95 \end{aligned}$$

$$\begin{aligned} \text{NA} &= 1.515 \times \sin 67^\circ \\ &= 1.515 \times 0.92 \\ &= 1.4 \end{aligned}$$

Objective lens

Magnification 12.5
NA 0.3

'Milky glass'
block

0.3

Same aperture
different magnifications

25 / 0.65

40 / 0.65

40 / 0.95

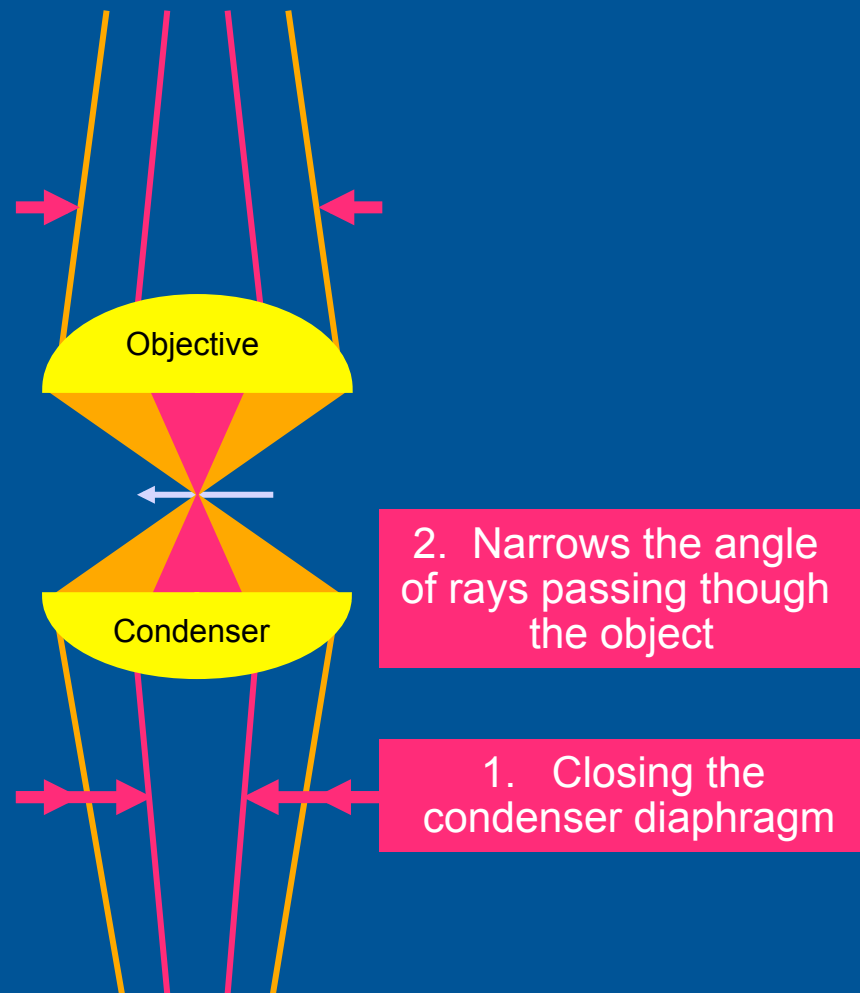

0.65

0.95

Same magnification
different apertures

NA of objective lens and condenser determine the NA of the complete system

Numerical Aperture is important in various ways

- Resolution depends on NA
($d = \lambda / 2 \times NA$, e.g. $200\text{nm} = 560\text{nm} / 2 \times 1.4$)
- Light transmission of objective depends on NA^2
- Depth of field of objective is (approximately) inversely proportional to NA^2

Minimum resolved distance was
derived by Ernst Abbe

$$d = \lambda / 2 \times NA$$

Backup

Dry Objective

$$\begin{aligned} \text{NA} &= 1 \times \sin 72^\circ \\ &= 1 \times 0.95 \\ &= 0.95 \end{aligned}$$

Immersion Objective

$$\begin{aligned} \text{NA} &= 1.515 \times \sin 67^\circ \\ &= 1.515 \times 0.92 \\ &= 1.4 \end{aligned}$$

Why is Numerical Aperture Important?

Inscription on Ernst Abbe's memorial

d

Minimum resolved distance

λ

Wavelength of imaging radiation

α

Half-aperture angle

n

Refractive index of medium

Numerical Aperture

Minimum resolved distance is now commonly expressed as

$$d = \lambda / 2 \times NA$$

Numerical Aperture determines Airy disk size

Dry Objective

$$\begin{aligned} \text{NA} &= 1 \times \sin 72^\circ \\ &= 1 \times 0.95 \\ &= 0.95 \end{aligned}$$

Immersion Objective

$$\begin{aligned} \text{NA} &= 1.515 \times \sin 67^\circ \\ &= 1.515 \times 0.92 \\ &= 1.4 \end{aligned}$$
